# The AI-Powered Data Lake You Can Build On

Employees are slowed down by the fact that 90% of data is unsearchable, causing delays in getting work done. New employees find it hard to navigate all the systems where data is stored. Legacy systems hold troves of inaccessible data and are costly to maintain.

90%
of data is
unsearchable
(IBM Study)

19%
of the workday is spent
searching for information
(McKinsey)

It takes
4 months
to get a new employee up to speed
(Client Feedback)

Break out of this tangle of inaccessible data and disparate systems with CrushBank.

CrushBank creates a powerful data lake for your company's information and makes everything searchable through an easy Q&A interface, using retrieval-augmented generation.

watsonx™

Data Lake

Key Features

Cost Efficiency and Time To Value	The service is consumption-based, making it a cost-effective choice. CrushBank provides a quick and efficient solution to data management needs without significant upfront investment.
Integration and Automation	Ingests data from all sources using a Universal API.
Private Data Lake	Secure data lake that provides users with easy access to information without the need for searching each system separately.
Controlled Information Sources	Data used for results is limited to corporate data sources. No mixing with public or Internet data, so answers are relevant and consistent. No corporate data is passed to public AI systems.
Enhanced Search Capability	CrushBank can extract specific information from a vast array of document types quickly and accurately.
Ease of Use and Broad Accessibility	Easy implementation and access through different interfaces including browsers, SMS and Microsoft Teams.
Scalability and Customization	CrushBank is suitable for businesses of all sizes and is capable of managing thousands of documents. It offers scalability and customization options to meet specific business needs.

CrushBank Neuro
